

Application No. 09/833,151
Attorney Docket No. 00/8026
Customer No. 32,127

AMENDMENTS TO THE CLAIMS:

Please amend claims 1, 22, and 35, to read as indicated in the following listing of the claims. This listing of claims will replace all prior versions and listings of claims in the application:

1. **(Currently Amended)** A wireless telephone comprising:

a memory, comprising:

a synchronization routine, wherein the synchronization routine is downloaded from a remote server ~~based on a determination that the synchronization routine is not stored in the memory~~ if the synchronization routine is not present in the wireless telephone; and

a database;

said synchronization routine being adapted to automatically transmit information reflecting a database change to a computer over a wireless network.

2. **(Original)** The wireless telephone of claim 1, wherein said transmission of the information occurs after said synchronization routine identifies a difference between said database and a database on the computer.

3. **(Original)** The wireless telephone of claim 1, wherein said transmission of the information occurs after a predetermined period of time.

Application No. 09/833,151
Attorney Docket No. 00/8026
Customer No. 32,127

4. **(Original)** The wireless telephone of claim 1, wherein said transmission of the information occurs after said synchronization routine identifies a predetermined number of differences between said database and a database on the computer.

5. **(Original)** The wireless telephone of claim 1, wherein said database comprises a plurality of names and associated telephone numbers and other information.

6. **(Previously Presented)** A computer-implemented method for synchronizing a data file of a wireless telephone with a data file of a computer over a wireless network, the method comprising:

storing a synchronization routine in a memory of the wireless telephone;

establishing a voice communication link between the wireless telephone and a second telephone;

monitoring a change to the data file of the wireless telephone;

initiating the synchronization routine to transmit the change to the computer over the wireless network; and

receiving the change by the computer.

7. **(Original)** The method of claim 6, wherein the monitoring step further comprises comparing the data file of the wireless telephone with a data file stored on a controller on the wireless network.

Application No. 09/833,151
Attorney Docket No. 00/8026
Customer No. 32,127

8. **(Original)** The method of claim 6, wherein the initiating step further comprises:

transmitting data file changes from the wireless telephone to a controller on the wireless network;

updating a data file on the controller to reflect the changes from the wireless telephone; and

transmitting data file changes from the controller to the computer.

9. **(Previous Presented)** A computer-implemented method for synchronizing a data file of a computer with a data file of a wireless telephone over a wireless network, the method comprising:

storing a synchronization routine in memory of the computer;

establishing a voice communication link between the wireless telephone and a second telephone;

monitoring a change to the data file of the computer;

initiating the synchronization routine located in memory of the computer to transmit data file changes from the computer to the wireless telephone over the wireless network; and

receiving the data file changes by the wireless telephone.

10. **(Original)** The method of claim 9, wherein the monitoring step further comprises comparing the data file of the computer with a data file stored on a controller on the wireless network.

Application No. 09/833,151
Attorney Docket No. 00/8026
Customer No. 32,127

11. **(Original)** The method of claim 9, wherein the initiating step further comprises:

- transmitting data file changes from the computer to a controller on the wireless network;
- updating a data file on the controller to reflect the changes from the computer;
- and
- transmitting data file changes from the controller to the wireless telephone.

12-15. **(Canceled)**

16. **(Previously Presented)** A system for synchronizing a data file of a wireless telephone with a data file of a computer over a wireless network, the method comprising:

- means for establishing a voice communication link between the wireless telephone and a second telephone;
- means for monitoring a change to the data file of the wireless telephone;
- means for initiating a synchronization routine located in memory of the wireless telephone to transmit the change to the computer over the wireless network; and
- means for receiving the change by the computer.

17. **(Previously Presented)** The system of claim 16, wherein the means for monitoring further comprises means for comparing the data file of the wireless telephone with a data file stored on a controller on the wireless network.

Application No. 09/833,151
Attorney Docket No. 00/8026
Customer No. 32,127

18. **(Previously Presented)** The system of claim 16, wherein the means for initiating further comprises:

means for transmitting data file changes from the wireless telephone to a controller on the wireless network;

means for updating a data file on the controller to reflect the changes from the wireless telephone; and

means for transmitting data file changes from the controller to the computer.

19. **(Previously Presented)** A computer-readable medium containing instructions for synchronizing a data file of a wireless telephone, the method comprising:

establishing a voice communication link between the wireless telephone and a second telephone;

monitoring a change to the data file of the wireless telephone;

initiating a synchronization routine located in memory of the wireless telephone to transmit the change to the computer over the wireless network; and

receiving the change by the computer.

20. **(Original)** The computer-readable medium of claim 19, wherein the monitoring step further comprises comparing the data file of the wireless telephone with a data file stored on a controller on the wireless network.

Application No. 09/833,151
Attorney Docket No. 00/8026
Customer No. 32,127

21. **(Original)** The computer-readable medium of claim 19, wherein the initiating step further comprises:

transmitting data file changes from the wireless telephone to a controller on the wireless network;

updating a data file on the controller to reflect the changes from the wireless telephone; and

transmitting data file changes from the controller to the computer.

22. **(Currently Amended)** A wireless network for synchronizing a data file of a wireless telephone with a data file of a computer, said network comprising:

a wireless telephone;

a controller coupled to said wireless telephone by a wireless interface, said controller comprising a synchronizing routine, wherein the synchronization routine is downloaded from a remote server ~~based on a determination that the synchronization routine is not stored in the controller~~ if the synchronization routine is not present in the controller; and

a computer coupled to said controller;

said synchronizing routine adapted to:

compare a controller memory to a corresponding memory of the wireless telephone;

update the controller memory to reflect any differences resulting from the comparison; and

transmit the changes to the computer.

Application No. 09/833,151
Attorney Docket No. 00/8026
Customer No. 32,127

23. **(Original)** The wireless network of claim 22, wherein said wireless telephone further comprises a synchronizing routine.

24. **(Original)** The wireless network of claim 23, wherein the synchronizing routine associated with the wireless telephone is adapted to:

compare a memory of the wireless telephone to a corresponding memory of the computer; and

update the wireless telephone memory to reflect the changes from the comparison.

25. **(Original)** The wireless network of claim 22, wherein said computer further comprises a synchronizing routine.

26. **(Original)** The wireless network of claim 25, wherein the synchronizing routine associated with the computer is adapted to:

compare a computer memory to a corresponding memory of a wireless telephone; and

update the memory location associated with the computer to reflect the changes from the comparison.

Application No. 09/833,151
Attorney Docket No. 00/8026
Customer No. 32,127

27. **(Original)** A computer-implemented method for synchronizing a data file of a wireless telephone with a data of a computer over a wireless network, the method comprising:

establishing a voice communication link between the wireless telephone and a second telephone;

initiating a synchronization routine to transmit the data file from the wireless telephone to the computer over the wireless network; and

receiving the data file by the computer.

28. **(Original)** The method of claim 27, wherein the initiating step further comprises:

comparing the data file of the wireless telephone with a data file stored on a controller on the wireless network and;

initiating a synchronization routine to transmit the data file from the wireless telephone to the computer over the wireless network, upon the occurrence of a predetermined event.

29. **(Original)** The method of claim 27, wherein the initiating step further comprises

transmitting data file changes from the wireless telephone to a controller on the wireless network; and

updating a data file on the controller to reflect the changes from the wireless telephone.

Application No. 09/833,151
Attorney Docket No. 00/8026
Customer No. 32,127

30. **(Original)** The method of claim 29 further comprising transmitting data file changes from the controller to the computer.

31. **(Original)** A computer-implemented method for synchronizing a data file of a wireless telephone with a data of a computer over a wireless network, the method comprising:

establishing a voice communication link between the wireless telephone and a second telephone;

initiating a synchronization routine to transmit the data file from the computer to the wireless telephone over the wireless network; and

receiving the data file by the wireless telephone.

32. **(Original)** The method of claim 31, wherein the initiating step further comprises:

comparing the data file of the wireless telephone with a data file stored on a controller on the wireless network and;

initiating a synchronization routine to transmit the data file from the wireless telephone to the computer over the wireless network, upon the occurrence of a predetermined event.

Application No. 09/833,151
Attorney Docket No. 00/8026
Customer No. 32,127

33. **(Original)** The method of claim 31, wherein the initiating step further comprises:

transmitting data file changes from the computer on the wireless network to the wireless telephone; and

updating the data file on the wireless telephone to reflect the changes from the computer.

34. **(Original)** The method of claim 31 further comprising transmitting data file changes from the computer to a controller on the wireless network.

35. **(Currently Amended)** A system, comprising:

a wireless telephone, comprising a telephone database;

a computer, comprising:

a synchronization routine, wherein the synchronization routine is downloaded from a remote server ~~based on a determination that the synchronization routine is not stored in the computer~~ if the synchronization routine is not present in the computer; and

a computer database; and

a wireless network interconnecting the wireless telephone to the computer;

said computer adapted to automatically invoke the synchronization routine to synchronize the telephone database with the computer database, upon the occurrence of a predetermined event.

Application No. 09/833,151
Attorney Docket No. 00/8026
Customer No. 32,127

36. **(Original)** The system of claim 35, wherein said wireless telephone further comprises a synchronization routine.

37. **(Original)** The system of claim 36, wherein said wireless telephone is further adapted to automatically invoke the wireless telephone synchronization routine to synchronize the computer database with the wireless telephone database, upon the occurrence of a predetermined event.
